Art Unit: 2614

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - I. Claims 1-5 and 10-16, drawn to motion artifact detection (and prevention of false artifact detection) of an interfaced signal, classified in class 348, subclass 701.
 - II. Claims 6-9, drawn to boosting frequency detection values in low contrast and brightness signal areas, classified in class 348, subclass 673.
 - III. Claim 17, drawn to reducing of interlaced motion artifacts, classified in class 348, subclass 607.

1. The inventions are distinct, each from the other because:

Inventions I and II are related as subcombinations disclosed as usable together in a single combination. The subcombinations are distinct from each other if they are shown to be separately usable. In the instant case, invention I has separate utility such as detection of motion artifacts regardless of a concern for low contrast and brightness areas. Alternatively, boosting detection values in low contrast/brightness areas does not require attention to interlace artifacts. See MPEP § 806.05(d)

2. Inventions I and III are related as subcombinations disclosed as usable together in a single combination. The subcombinations are distinct from each other if they are shown to be separately usable. In the instant case, invention I has separate utility such as just detecting motion artifacts without a concern for reducing the artifacts. See MPEP § 806.05(d).

Art Unit: 2614

3. Inventions II and III are related as subcombinations disclosed as usable together in a single combination. The subcombinations are distinct from each other if they are shown to be separately usable. In the instant case, invention II has separate utility such as boosting detection values in low contrast/brightness areas does not require reduction of interlace artifacts. See MPEP § 806.05(d).

4. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, because of their recognized divergent subject matter, and because the individual searches required for Groups, I, II and II are not required for the other two groups, restriction for examination purposes as indicated is proper.
